

Sample deliverable: lighting coordination sheet

Illustrative kitchen and dining example, revision 01. This is not a client commission or a document for installation or ordering. It shows the decisions to coordinate before finalising ceilings and electrical design.

Reference / purpose	Design intent	Open item / responsibility
L01 • worktop	Linear light beneath wall cabinets, independently controlled.	Joiner confirms profile, shielding and cable entry; lighting designer verifies the exact source and optics.
L02 • dining table	Pendant positioned on the centreline of the final table.	Architect confirms position and height; installation team checks fixing and ceiling load capacity.
L03 • circulation	Supplementary lighting with a separate evening scene.	Lighting designer checks layout and glare through calculation using the exact luminaires and materials.
C01 • controls	Working, dining and evening scenes; controls at entrances.	Electrical designer and controls supplier confirm wiring, driver compatibility, dimming range and programming.

Before the next revision: dimensioned plan with L01-L03 references, ceiling section, furniture positions, exact luminaire variants, accessible driver locations and circuit allocation. Quantities, input power, luminous flux, CCT, CRI, optics and controls are added from verified data for the exact variants.

The sheet records decisions and open items. It does not replace a luminaire schedule, lighting calculation, electrical design or manufacturer instructions. Deliverables and responsibilities are agreed for each project.
